INVENTIONS THAT MAKE OUR LIVES BETTER

- The Greek company MLS Multimedia was founded in October 1989 in Thessaloniki aiming at the development of firmware (hardware and software combined) products of high technology giving emphasis on novelty. Novelty and technology would be meaningless if they didn't make our lives easier: Making Life Simple

MAIC (MLS Artificial Intelligence Center) is one of the most important novelties in the history of MLS which is now integrated in its tablets και mobile phones. MAIC develops in a spectacular way the experience of using the tablet or the mobile phone by interacting with its owner. Simply through a voice instruction of the user MAIC can:

- make calls
- send text messages and e-mails
- search in the internet and YouTube
- track, surf and make a call to open pharmacies, hospitals, banks, gas stations
- inform for the nearest parking spaces, the traffic or the weather
- initiate installed applications
- make encyclopedic search and dictate its summary
- translate words or phrases and dictate the correct pronunciation from English to Greek and vice versa

MLS Artificial Intelligence Center

MAIC is your personal assistant . Just by turning on your device, through a voice instruction, it can open any application you want from the ones installed in your device. For instance, when you say “camera” or “video camera”, the camera opens immediately; by saying “torch” the “torch turns on; say “facebook” and and your facebook account immediately opens; it also activates “data”, “bluetooth”, etc. Moreover, when you say “search” and then, for example, “Nikos Gkalis” in Greek or “Michael Jackson” in English, it opens the search results in Google about Nikos Gkalis or Michael Jackson respectively. Finally, when you say “open pharmacies” or “gas stations” it can find the nearest ones to you and can navigate you through the MLS navigation which is incorporated in your device.

The company aims at spreading novelty, expanding the potentials for everybody and making our lives easier and more fascinating!
